

Benefits of Service Maintenance

In order to ensure your booth continues to operate in peak condition, maintenance needs to occur on a regular basis. Truflow recommend a maintenance schedule in line with the **4114:2020 Australian Standards**. This schedule provides the baseline for our maintenance process, which includes inspection, mechanical cleaning and adjustment, replacement filters and safety checks.

Compliance Requirements

A service program will ensure:

- Compliance documentation for insurance purposes.
- Booth Performance and Quality maintained.
- OH&S Requirements met
- Reduced downtime due to wear and tear
- Operator Safety and Airflow checks complete.
- Reduced fire hazard due to overspray build up being removed and mechanicals being cleaned.
- Type B Gas Compliance for Heated Booths

Service Packages

We have a service package to suit your Spray Booth needs, typically based on hours of usage or production volume we can tailor a package to suit you. All Service packages include inspection checklists and service reports. Truflow recommends the **Gold Package** as a strong preventative maintenance program.
